7	What I claim is:
· 1	. A double-pane window for the generation of electricity from light during daylight hours,
С	omprising:
a	first and second panes, said panes are parallel to each other, each of said panes having a
p	perimeter; and
a	plurality of solar cells pivotally mounted between said first and second panes, said plurality of
S	olar cells pivot to follow a movement of a sun.
2	. The double-pane window of claim 1, further comprising a dichronic coating applied to one of
S	aid panes.
3	. The double-pane window of claim 1, wherein said plurality of solar cells are coupled to a
С	ontroller, said controller directs said plurality of solar cells to follow said movement of said sun.
4	. The double-pane window of claim 1, wherein said plurality of solar cells are parallel to each
	ther.
Ū	
5	. The double-pane window of claim 1, wherein said controller includes a memory, said memory
c	ontaining a set of solar information.
